Dr. Wagner Vendrame is an Associate Professor of Environmental Horticulture with IFAS at University of Florida. His research has involved plant cells in microgravity, ornamental horticulture but more recently he had become one of the few experts on the promising oil crop—Jatropha Curcas.

But is it “Hype or Hope”?

Please join us for an evening with Dr. Vendrame, come to hear his talk and join the discussion after.

Don't miss a chance to become a part of this
important conversation.

-BEST Society

- Our next seminar will take place on March 17
- The featured speaker for that night will be Jerry Karnas of the Environmental Defense Fund
- If you have questions about on how to join the Society or would like to know more, please contact us.
