

Please join us for the following ESSIE Seminar:

Life after death: The global dead zone epidemic and the resilience of coastal ecosystems

By Dr. Andrew H. Altieri

Thursday, February 25th, 12-1pm

PERC 202

Dr. Andrew Altieri's research explores human interactions with coastal ecosystems. He examines drivers of change that include overfishing, pollution, species invasions and extinctions, and habitat loss. Using a combination of perspectives grounded in natural history and ecological theory, he explores mechanisms of resilience in biodiversity and ecosystem function of coral reefs, mangrove forests, rocky shores and seagrass meadows. Andrew earned his B.A. at UC Santa Cruz and his Ph.D. at Brown University, and he is now a staff scientist at the Smithsonian Tropical Research Institute in Panama. For more information, please visit Andrew's website: www.altierilab.org

If you wish to talk with Dr. Altieri after his seminar, ESSIE faculty will be hosting a happy hour at First Magnitude Brewery (1220 SE Veitch St, Gainesville, FL) on Friday, Feb. 26th from 6-8pm
